Good Morning Tim,

Thank you for your time yesterday. The Port appreciates the opportunity for continued dialogue and looks forward to participating in any virtual or in-person workshops to discuss our comments and proposed revisions to the District's rules. Please let us know if we can answer any questions about our specific comments on the proposed rules.

Within the next few weeks, we anticipate providing the District with supplemental technical data in support of our pending permit application. Recognizing that this additional information will require time for both preparation and the District's technical review, we propose that our application remain on the October 2 agenda but that it be tabled, with the expectation that full consideration of our application and hearing before the Board will be rescheduled for either October 16 or October 23. The Port understands that District review of this supplemental application information will result in additional expense to the District. We are prepared to provide an additional payment of \$6,500 to help cover the cost of that technical review. We believe this approach will provide the District and its technical consultants adequate time to fully evaluate the supplemental information, and address any of the prior concerns raised by the District, while allowing the permit process to continue moving forward in a timely manner.

We hope this proposed schedule is workable for you and the District, and we appreciate your continued cooperation.

Thanks
Sean

Subject: POV application - tech memo for tomorrow

Tim,

In support of tomorrow's scheduled conversation, please see the attached technical memorandum from AGS. We hope that you share this information with Collier Consulting and that this technical information will allow the District to withdraw its notice of intent to contest application ADSSP-20260402-01.

The Port continues to support the efforts by the District and groundwater users to rely on alternative water supplies for industrial use while preserving higher-quality and more accessible groundwater resources for other uses.

We look forward to visiting with you tomorrow.

Thanks
Sean
